INTRODUCTION

The art of presenting a story in stand-alone instalments at regular intervals began in Victorian England with the popularization of serial literature. The beginning of the phenomenon of serial literature was marked by the stories of *The Posthumous Papers of the Pickwick Club*, a work that began to be published in sequential parts in April 1836, ending with the last delivery in November 1837. Charles Dickens presented a total of twenty part issues in which a series of adventures of a group of protagonists portrayed the life of the time with sense of humour and extravagant characters.

The publication of a novel in instalments is the closest thing to the broadcast of episodes that forms the basis of a TV series as a narrative form. In the 19th century, the editors discovered that they could use serial fiction as a way to engage readers since they developed a fictional relationship with the story they were reading. That same discovery was made by television channels in the 20th century when they came to the conclusion that serial fiction created a commitment on viewers.

TV series are a growing phenomenon in the 21st century and every day new topics arise to be portrayed in this format that allows the audience to better track their favourite stories, and creators to introduce the characters more deeply. In that audience, there are a large number of teenagers.

Internet streaming is ready to become a reliable, and perhaps definitive, alternative to traditional television. We are not talking about a new technology, since streaming (viewing audiovisual content without downloading it) has been with us for more than a decade. But until now, it was of poor quality, the users did not have enough bandwidth, or the payment platforms were very expensive.

With more than 65 million subscribers and more than 100,000 titles in its catalogue, Netflix is the worldwide reference of streaming service, although we can also find other platforms such as HBO, Wuaki.tv, or Hulu, which are also famous.
According to the Information Society report 2014, published by Telefónica, video on demand (free) is already more popular than television among young people between 14 and 16 years old. Thus, 90% of teenagers say that they use the Internet to enjoy multimedia content, compared to 73% that still watch traditional television. 25% of teenagers no longer watch live television, only pre-recorded programmes. Among users who use the Internet to access content, 73% use downloads, and 75% use streaming.

Nowadays, teachers have had to adapt their methodologies when it comes to teaching since technology is very present in students’ lives. The approaches that teachers can use in the classroom had to adapt to the new era that is to the technology imposed in high schools. Now many resources, materials, tools, etc. used in classrooms are digital.

We agree with Vargas (2008, p.2) on the fact that:

Information technologies stimulate student collaboration, help students focus on learning, improve motivation and interest, foster the search spirit, promote integration, and stimulate the development of certain intellectual skills such as reasoning, problem solving, creativity and the ability of learn to learn.

Since we can stream TV series online from any place, it is a good idea to transfer this situation to the classrooms and take advantage of the many benefits TV series bring to students since they can learn to communicate in real life situations in English. The closeness our students have to watching TV series online can make TV series a key element in the teaching-learning process of foreign languages.

Although there has been much literature written on the didactic use of films for teaching EFL, studies regarding the benefits of using a TV series in the classroom of EFL are still limited.

The aim of this paper is to provide activities using a TV series as a tool for improving the Competence in Linguistic Communication in Secondary Education using a Communicative Approach.
In order to achieve this goal, a proposal for intervention was designed for a bilingual group of 4th of Secondary Education (ESO). The proposal called “We are detectives!” is going to be implemented during the two extra hours of the subject of First Foreign Language: English this group has on Wednesday afternoons, since they belong to a bilingual section. We are going to use the BBC’s TV series Sherlock since it adapts the famous short stories of Sir Arthur Conan Doyle in a contemporary and very solvent way. I consider that Sherlock is a TV series suitable for students of English with a medium-high level. The vocabulary level sometimes is complex but thanks to the context, students can understand the meaning. Normally, students are more used to watching American TV series and with Sherlock, students will be able to get in touch with British English since the actors have very good diction and speak a very good “London English”. The proposal is composed of 6 sessions of 100 minutes each, at the end of which students will have to create a final task. In groups of 4, students will have to invent a fictional crime scene with a lot of details and clues. When the groups have created the crime scene, they are going to do an oral presentation, and the class will have to act as detectives and try to guess what happened and who the murderer was.

This paper is structured into five parts. The first one is devoted to the review of some of the most relevant methods and approaches that exist for the teaching of a foreign language, with a focus on the Communicative Approach. The second part deals with the Information and Communication Technologies not only because of its importance in education, but also because it is the means through which TV series can be used as an educational resource. The third part deals with the benefits of using a TV series as a didactic tool for the teaching of foreign languages. The fourth part is dedicated to the explanation of the proposal for intervention designed for the two extra hours of English as a foreign language in a group of 4th of ESO of a bilingual section. It is a didactic unit of 6 sessions, whose main objective is to develop the Competence in Linguistic Communication by combining the use of the BBC’s TV series Sherlock together with the Communicative Approach. And finally, the fifth part is devoted to the conclusions derived from the reflections that took place during the design of the intervention proposal.
1. METHODS AND APPROACHES TO FL TEACHING

The process of teaching and learning a second language implies the use of a method or approach that implicitly or explicitly guides the teaching practice. Throughout history, many methodologies and approaches have been posed. Those methods and approaches differ on two fundamental issues that any method or approach must address and that make them different: the nature of learning and the theory of language.

In this section, we intend to focus on the Communicative Approach and its theoretical basis, but before that, we want to make a historical overview, dealing with the methods and approaches that have existed before the Communicative Approach and that had great impact in the history of teaching foreign languages in the 19th and 20th centuries.

1.1. Traditional approaches and methods

Along the history of foreign language teaching, educators have tried to structure processes of foreign language learning and teaching through a series of methodological principles that established the objectives, contents and procedures of the foreign language class. As a consequence, many methods and approaches have emerged with the aim of planning language teaching and putting it into practice. Although the evolution of methods and approaches may seem linear, in fact, they overlap. Different methodological currents have coexisted and coexist in the same period.

In the 19th century, the Grammar-Translation Method was developed. This method adopted as a model the system used for the teaching of Latin and Greek. For this method, language is a system of rules that must be taught through texts. According to Stern (1983), the first language is maintained as the reference system in the acquisition of the second language. Grammar learning is deductive, that is, a rule is presented, explained and memorized, and then practiced in translation exercises. The student has a scarcely participative role and is limited to follow the instructions of the teacher, to memorize rules and lists of vocabulary, to read, and to translate.
At the end of the 19th century, the Direct Method was established and it reached its greatest relevance and diffusion in the first half of the 20th century. According to Neuner and Hunfeld (1993), the starting point for the development of this method happened when the German phonetician Wilhelm Viëtor published in 1882 his pamphlet *Der Sprachunterricht muss umkehren!* (*Language Teaching Must Start Afresh*). Thanks to this pamphlet, a revolutionary movement, the Reform Movement, in language teaching methodology arose. In this pamphlet, he criticized the teaching of a modern language with old-fashioned means and rules since a language is not composed of isolated, juxtaposed words but of phrases. Loose words or phrases that are outside of any textual context will never arouse the interest of the students.

The Direct Method provided a new orientation and proposed a way of teaching in which oral language had absolute priority and advocated teaching in the foreign language. The Direct Method made great changes and thus opened a new way to the teaching of foreign languages but this method does not mention the confrontation of the two linguistic systems (the student’s first language system and the foreign language system). Besides, this same method can only be applied in private lessons, with highly motivated students and with native teachers being difficult its implementation in public schools or large groups.

After World War II, two methodological trends were developed: the Audio-lingual Method in USA and the Audiovisual in France. The Audio-Lingual Method aimed to achieve an oral domination of foreign language and made the learners speak automatically, without having to resort to translation from the mother tongue. The audiovisual method has not been widely implemented, except in France and its effectiveness cannot be denied, but this method has been harshly criticized and labelled as rigid and authoritarian since the lesson is perceived as a mechanism of precision, everything is focused on the language. The contents and methodology obey too very strict laws and require an application in letter. The application of this method in the classroom showed that the Structuralist nature of the method prevailed over the idea of global understanding and transmission of meanings through images.
1.2. Communicative Language Teaching

The development of the methods and approaches previously mentioned were carried out in a determined historical, socio-cultural and sociolinguistic context.

The Communicative Language Teaching, also known as Communicative Approach, should not be understood as a replacement of the methods that prevailed until its development; it does not eliminate, but rather re-adjusts the pedagogical principles of previous methods.

Berard (1995) explains that the Communicative Approach develops from a critique of audio-visual and audio-visual approaches for language teaching. Its main purpose is to establish communication, taking into account the needs of the student that determines the skills that the student wants to develop (understanding and oral expression or compression and written expression), with the use of authentic documents of daily life for a better and faster acquisition of the language. The knowledge acquired will be used in real situations, respecting the socio-cultural codes.

The Communicative Approach is a methodological current resulting from changes experienced in the previous years and it proposes to overcome the concept of language as a system of rules to focus attention on communication.

Following Chomsky's theories pointing to the importance of creativity and cognitive processes, British applied linguists pointed to another dimension of language: the functional and communicative dimension. These assumptions posit that the ability to communicate is going to be above the structures themselves. Language is more than a simple set of rules. It is an active instrument for the creation of meanings.

The Communicative Approach shifts attention from what language is to what is done with language, thus determining the content to be taught, the role of learners and teachers, the type of materials, and the procedures and techniques that are used.

Language teaching goals become communicative goals, that is, the learner is able to greet, communicate in a store, write a note, read something and understand it ... These objectives will be conditioned to the analysis of needs.
It must be taken into account that sometimes the word "necessity" is a bit excessive and that it will be the teacher's task to cause the students to perceive as such some of the proposals that are presented to them.

The methodological principles of the Communicative Approach are the following:

- The teaching should be focused on the learner.

- The language, conceived as an instrument of communication, obliges to develop a Competence in Linguistic Communication on forms, meanings and a knowledge of linguistic functions (linguistic functions to express pain or discomfort: it hurts, I have pain of ..., I feel bad ...)

- To achieve good communication the learner should take into account the socio-cultural context, the characteristics of the interlocutors, the relationship with them, and the object of the conversation.

- The activities that lead to real communication generate the learning and therefore will have to propitiate them, presenting situations that promote that communication. The student will be given the opportunity to say what he or she wants to say and choose how to do it.

- The instrument of communication in the classroom is the foreign language itself.

- This approach takes into account daily life and the language and culture of students.

- The five skills (listening, speaking, reading, writing and interaction) are taken into account from the beginning and are equally integrated throughout the process, with special emphasis on the speaking one at the beginning but insisting on a balanced development of all of them.

- The teacher becomes a facilitator of learning. The teacher is a source, among many others, of input and information. He should pay attention to the learning processes of the students and to the needs that are generated. The concept of
error should be observed in another way: mistakes give us good clues about the learning process. The protagonist is the student.

- This approach prioritizes fluency over grammatical correction as long as the communication is not interrupted. Therefore, one must be more tolerant on errors, without allowing them to become fossilized.
2. INFORMATION AND COMMUNICATION TECHNOLOGIES

In this section we will talk about the concept of information and communication technologies, focusing on their definition, how they appeared, the types in which these technologies can be classified, and their educational use because ICTs make possible the use of TV series in the classroom.

2.1. Definition

Nowadays, information and communication technology is one of the most discussed topics and many authors are set to give their own definition of ICTs. Alcántara (2009), for instance, considers them as those tools, supports and channels that process, store, synthesize, retrieve and present information in a varied way, and, in some way, meet the needs of society. Adell (1998) defines them as the set of devices, tools, supports and channels for management, treatment, access and distribution of information based on digital coding and on the use of electronics in communications. On the other hand, Cobo (2009) gives a more detailed definition of what he considers TICs referring to these as technological devices (hardware and software) that allow to edit, produce, store, exchange and transmit data between different information systems that have common protocols. These applications, which integrate computer media, telecommunications and networks, enable both interpersonal (person to person) and multidirectional (one to many, or many to many) communication and collaboration. These tools play an important role in the generation, exchange, diffusion, management and access to knowledge. On the other hand, Díez (2003) thinks that, in many occasions, we confuse ourselves when referring to the new technologies of information and communication, since we consider that these are only the instruments that we use like computers or interactive whiteboards, but these are only a part of what these technologies encompass.
All those authors are in favour of using these resources, which they consider to be ICT, in the teaching, but it cannot be said that all of them are indeed an educational resource, since Pico (2013) states that for them to be considered as such, a series of requirements must be met, such as to improve the teaching activity and the training process for which they are intended; in turn, they should collaborate with self-learning, as well as build meaningful knowledge in the student. Therefore, information and communication technologies do not work in isolation, but need the action of teachers so that the previously mentioned requirements come to fruition, since they alone can be misused by students.

There are many classifications of ICT, but one of the best known is the one that groups them into three large groups such as networks, terminals or devices and the services they offer.

- Networks:
  - Fixed telephony.
  - Broadband.
  - Mobile telephony.
  - Television networks.
  - The Internet.

The Internet is the best known network in the world; it is a very powerful tool as a means for communication, source of information and place to publish new content and knowledge. The new generations are growing and forming together with the constant development that this network is reaching because the Internet is more and more present in all the environments that surround people and it becomes an indispensable tool in everyday life.

- Terminals or devices:
  - Mobile phones.
  - Tablets.
  - Game consoles.
- Computer.

The computer is one of the most important ICT tools used today. Computers are a resource that offers a lot of help to teachers. Other technological devices such as the interactive whiteboard or the multimedia projector also make the teaching-learning process richer, more motivating and dynamic for students and for the teacher in the classroom.

There are many programs that do not need the Internet to work, this is a great advantage since there are often problems in the network and teachers have to look for alternatives for this. Some of them are EdiLIM or MTO where we can find multimedia and interactive content.

- Televisions.

Television and education are complementary. Television has an educational value as it helps in learning concepts and generates or modifies habits, values and customs (Marín, 2005, Medrano, Cortés and Palacios, 2007).

Television entertains and forms students, that is, students can learn by watching television in a different and fun way (Medrano, 2005).

- Portable audio and video players.

In the learning process, the senses of sight and hearing are very important, so it is necessary to incorporate audiovisual media in the classroom in order to strengthen concepts, promote and develop motivation, encourage the active participation of students and improve their critical though (Marques, 2001).

- ICT services:
  - Email.
  - Search for information.
  - Audio and music.
  - Television and cinema.
  - Electronic commerce.
- Education.

- Video games and mobile services.

- Blogs.

- Virtual communities.

- Platforms for watching videos, movies, TV series online

Many of the information and communication technologies have become obsolete due to the constant development of other more sophisticated resources; the following are some cases:

- Diskette.

- Discman.

- Walkman.

- Fixed telephone.

- Desktop computer.

- VHS video tapes.

- Typewriters.

- Magnetic tapes.

- Radio.

- Record players.

- Typewriter.

- CD Readers.

- Analogue camera.

- Analogue video camera.
Most of these devices have been deprecated because they have been replaced by other digital devices that save more time and money or allow a breakthrough when storing information material.

2.2. ICTs in education

The inclusion of ICTs in the Spanish education system had a lot to do with the electronic revolution that began in the 1970s. It is from this moment when ICTs begin to emerge by the scientific advances especially in the field of electronics, and as a result of this, direct reactions can be seen in this last aspect: the remarkable reduction of prices in the materials for the creation of new technological products and the boom of the information technologies, which unite technology and software.

ICT has a recognized potential to support learning, the development of social knowledge and the development of skills to learn independently.

Today ICTs are one of the keys to the education of citizens of the 21st century. The evolution of ICTs throughout the last century has been very important and still more in the century we are. The 1950s are considered key to further development in education.

In the 1960s, the media (radio and television) took off increasing the potential capacity of influence over millions of people and causing social customs to change in fields such as economics, journalism, entertainment, politics and education among others.

In the 1970s, computers began to be used in education, and later, with the emergence of PCs (personal computers), the option of conceiving individualized teaching through these means would be clearly seen.

In the 1980s, the inclusion of new technologies in schools began to be studied. They also began to receive criticism as to whether they were good or not to be developed successfully in educational centres; it is true that at that time there were many aspects and approaches to be polished for ICTs to become more accepted.
During the 1990s, the integration of ICT in the education system was already a fact. The Internet became the centre of attention and took an important part becoming an object of investigation, soon proving that it was a useful tool to use materials online. Already in the new century, between 2000 and 2001, a bachelor's degree in computer education was created whose goal was to bring the use of telecommunications, audio-visual technologies and, above all, information technology to schools so that students could begin to use them. Similarly, in the new century, new ways of communication have appeared such as instant messaging applications, chats, blogs, or social networks.

To explain the evolution of the web we use terms such as 1.0 (static web) and 2.0 (dynamic web). The web 1.0 is characterized by pages that are accessed to look for information. In them, you can only read what the page administrator has put. To create pages of this type it is necessary to have knowledge about the topic that is written and about web programming. The web 2.0 user can access it to consult information and contribute to it by adding content or comments to existing ones. The same happens with the tools 2.0, arising from Web 2.0 and that allow to stop being a receiver of communication to create and to share information and opinions with the other users of Internet.

Many authors have criticized the introduction of ICTs in the classroom because they consider that it is negative for students since they claim that ICTs cause distractions and aside from the main objective that is learning. Ramos et al. (2009), among others, argue that ICTs can produce a deficit in the use of the verbal communication.

However, ICTs offer a multitude of possibilities to help improve the effectiveness of students' learning in relation to foreign languages within the classroom itself.
The use of technology in the classroom also has benefits in relation to the basic skills of reading and listening comprehension, oral and written production. Some of these advantages are:

- **Reading comprehension.** As stated in Thorne (2013), ICTs can be used to stimulate students' written comprehension by searching on the Internet for texts appropriate to their level and the contents that the teacher wants to teach in each session. As for ICT tools to improve reading, multimedia texts which have images, videos, audio clips and other elements help to capture the general meaning of the message.

- **Listening comprehension.** Carrera (2012) claims that ICTs offer a large amount of auditory material that can be used to help students better understand the language used to deal with a variety of different situations.

- **Written production.** According to González (2010), through the use of ICTs, students can produce written productions in Word format, which facilitates their correction and subsequent editing. Written production can also be used in the correspondence and chat activities where writing will play an essential role in the exchange of information. Another useful tool in this regard are grammar exercises, there are a lot of those exercises on the internet and they offer the student a personalized and quick correction of their answers, making them more aware of their mistakes and work to correct them.

- **Oral production.** Listerri (1998) explains that in order to improve the oral production in a foreign language, resources such as sound recording or videoconferencing with students speaking that language can be used. This helps to create real conversation situations that will encourage the acquisition and learning of strategies and habits of improvement for listening comprehension.
3. TV SERIES AS A DIDACTIC RESOURCE IN EFL CLASSROOM

3.1. Formats

Over the years, there have been many ways to watch TV series. TV series, understood as a narrative form, have its origins in serial literature which began in the Victorian Period in England. In the 19th century, editors discovered that serial fiction was a good way to hook readers since readers wanted to know what was going to happen to its characters in the next fascicle. That same discovery was made by television channels in the 20th century when they realized that serial fiction was a great method to capture and hold audience.

At the beginning of the 20th century, cinema and radio began to experiment with serial narration. The first serial film was the French production *Nick Carter, le roi des détectives*, released in cinemas in September 1908 and finished in November of that same year. Produced by Éclair and directed by Victorin-Hippolyte, it was based on the character of a detective who had starred in his own stories in the New York Weekly magazine. Each delivery of the episodes that could be seen in the cinemas, narrated a whole history, without any continuity more than the one of the personage. The first serial film with a continuous narrative was the American series *What Happened to Mary*, a series of twelve reels produced by Edison Studios, which was released in July 1912. This series narrated the story of a young orphan girl abandoned at birth. On the radio, serial fiction became popular in the 1920s, and it is the medium of creation of the sitcom genre with *Sam 'n' Herry*, a fiction created in 1926 by Freeman Gosden and Charles Gorrell who introduced two African American characters trying to earn a living in ten-minute deliveries that kept the plot from one to another. Radio plays were also performed, called radio plays, which were broadcast by serials, thus becoming another reference for the first television fictions alongside serial literature.
At the end of the 19th century, some technological advances such as the telegraph or the telephone, led inventors, scientists and thinkers to reflect about the possibility of creating a device that could transmit images. By the time the idea of television began to be conceived, cinema was still at its beginnings and radio was a very popular medium of communication. In the following decades, diverse inventors worked in the creation of the television. Televisions began transmitting photographs and later began to be able to transmit images in movement. In 1925 the Scottish inventor John Logie Baird made the first real experience using two discs, one on the transmitter and one on the receiver, which were attached to the same axis so that their rotation was synchronous and separated by 2 mm making possible to watch images in movement.

The first public television broadcasts were made and in 1931, the first television fiction written specifically for the medium was The Television Ghost in the USA. It was neither a theatre adaptation nor a radio drama. It was inaugurated on August 17, 1931 and ended on February 15, 1933.

Nevertheless, the Second World War put an end to this stage in which several television fictions were broadcast. From that moment, the television dream that had been built since the 1920s faded. After the end of the war, the television finally had the conditions to establish itself as a mass media.

During the post-war period, the expansion of television took place at high speed, being integrated into the lives of millions of people. Many TV series were created and broadcast on television.

The emergence of a massive market of media players for private consumption of TV series was the origin of a powerful cultural industry that emerged in the last quarter of the twentieth century. The supports changed due to the technological development, and in a period of just thirty years, we moved from images recorded exclusively on celluloid tapes to the mass commercialization of magnetic tapes (VHS, Beta, video 2000), later Digital discs (DVD) and, finally, the discs of high definition (Blu-ray), that have been prevailing in the last years. The Internet revolutionized the way people watch TV series since they are streamed online in different platforms available for this.
As we have seen, serial literature, film and radio are part of the roots of TV series as a narrative form and are also present in the development of the TV series over the decades to the present day. TV series can be viewed from various technological media. Originally, television was the main medium, but nowadays with the new technologies, TV series can be seen in more varied formats and with greater accessibility.

3.2. Benefits and drawbacks

The rise of TV series has generated a whole movement of followers who analyze and comment chapters, share recommendations and think of alternative endings for the season being all this movement a proof of the interest aroused by TV series both in adults and teenagers.

TV series are an integral part of students' lives, so it makes sense to take them to the language classroom. Learning English by watching TV series is an awesome way to improve student’s English skills. TV series are a teaching and learning tool that can add many benefits to the learning experience. They are a good resource because they are entertaining, motivating and enjoyable. Since motivation is one of the most important factors in determining successful acquisition of a second language, TV series are a great option to make the language learning process more attractive.

TV series bring variety and flexibility to the language classroom, expanding the range of teaching techniques and resources, helping students develop all communicative skills. TV series can also serve as a springboard for follow-up tasks such as discussions, debates on social issues, role-plays, reconstruction of a dialogue or synthesis.

TV shows are sometimes better than films because they are shorter, they allow you to return to the same characters in each episode and predict what will happen next.

Showing a short excerpt from a TV series when the characters use a structure or a grammatical point brings a whole new perspective to their class since students see that the grammar teachers are introducing is not just something they have to study because it is in the book but rather they need to study this because people who speak English as their mother tongue use this, as they just saw in the TV series. And, as a positive side effect, students can become interested in the TV series and start watching them in English in their spare time.
A TV series can help provide a balanced mix of entertainment with education. Using a TV series will make your students excited about learning, while providing them with a wider range of interesting learning materials.

Watching TV series is one of the best ways to improve students’ English vocabulary and learn to speak English more fluently. TV series provide more realistic contexts of the English language compared to those of English course books. Watching TV shows can improve conversational skills. They can also help to improve listening skills, as students can hear a variety of different accents. Another benefit of TV series is that students learn and understand the different cultural references that can appear and which can make the students feel more connected to the country and the language.

According to Peramos (2005), audio-visual resources such as TV series or films can modify the passive attitude of the student. The authenticity of the materials, with a correct exploitation, stimulates the student's cooperation, learning and interest. In order to promote less passive attitudes, TV series are a good option. The video is an excellent way to deepen the knowledge of a country's culture, and to establish a mental image of culture. The image, on the other hand, facilitates that the listening comprehension is more complete since the language, in a TV series or film, develops in a real context, that is to say, it has examples of the spoken language: expressions, linguistic behaviours (excuses, explanations) pauses, intonation, rhythm of speech, etc.

The use of TV series in the foreign language class is an effective way to present any subject, mainly cultural, providing a playful component and arousing the curiosity and interest of the students. On the other hand, it is significant since it is given importance to socio-cultural elements, linguistic registers, the use of the language, and the way of seeing the world through it.

The main disadvantages that can make a TV series not a good tool for teaching foreign languages are, on the one hand, that students may find TV series too difficult to understand and follow. On the other hand, some students may not like the TV series that the teacher is using in the class so the student will not be interested or motivated and that may affect the learning-teaching process.
3.3. Selecting appropriate TV series

However, on many occasions, teachers tend to project a TV series without taking into account aspects such as the projection time, the level, the ability of the student to comprehend and absorb the information that is projected at the same time, etc. It must be taken into account that a projection not only adds to the image linguistic, cultural or social information but also non-verbal information, such as gestures. The teacher, before issuing any type of film, must carry out an exhaustive study of the same and verify that it is adapted to the needs of his students.

For the activity to be a success, one of the aspects that the teacher must keep in mind is the correct use of the TV series. Peramos (2005) suggests that the first step that must be taken for a proper utilization of a projection is to consider the following aspects: What do we use it for? Which are the students? What will it contribute with? Once established these criteria, Peramos (2005) says that the teacher has to select a fragment of TV series taking into account this:

- Selection of the fragment and content: ideally, it should be a closed scene.
- Determination of the level: we must consider that the recipient of a TV series must be a student with medium-advanced language level.
- Determination of objectives: we must think that the objectives are not only linguistic but also cultural (greetings, behaviours, daily life, etc.) and pedagogical (these depend on the didactic exploitation of the teacher).
- Practice time: The practice time should not exceed 15 minutes, especially in the first projections, since students tend to "disconnect" after this phase.
- Activities: can be performed before, during or after watching the TV series.
4. PROPOSAL FOR INTERVENTION

The information that appears in this section aims at explaining the proposal for intervention, which uses the BBC’s TV series *Sherlock* as a means to improve the Competence in Linguistic Communication of a group of 4th year of ESO students.

The proposal for intervention is inspired in IES Ramón y Cajal, located in the town of Valladolid and centre where I have done the external practices. The proposal for intervention is designed for a group of 4th year of ESO, composed of 13 students, 8 girls and 5 boys, 16 years old. This course belongs to the branch of bilingualism, reading 5 hours per week of First Foreign Language. This proposal consists of 6 sessions, which are developed over eight weeks.

4.1. Contextualization

Before beginning with the presentation of the design and structure of the proposal, it is necessary to contextualize it from the legal point of view, as well as with regard to the characteristics of the centre in which it has been inspired.

4.1.1. Legal framework

This proposal bases on the following documents:

- Ley Orgánica 8/2013, de 9 de diciembre, para la mejora de la calidad educativa.

As for the use of ICTs, the preamble of this law says the widespread incorporation of Information and Communication Technologies (ICTs) into the education system, which will take into account the principles of design for all people and universal accessibility, will allow the customization of education and adapt it to the needs and pace of each student. ICTs will serve to reinforce and support in cases of low performance and, on the other hand, will allow students to expand without limitation the knowledge transmitted in the classroom. Motivated students will thus be able, according to their capacity, to access the educational resources that institutions at the national and international levels offer. The ICTs will be a fundamental piece to produce the methodological change that leads to achieve the objective of improving the quality of education. Likewise, the responsible and orderly use of these new technologies by the students must be present throughout the educational system.
• Real Decreto 1105/2014, de 26 de diciembre, por el que se establece el currículo básico de la Educación Secundaria Obligatoria y del Bachillerato.

Both the national and the regional curriculum mention the integration of ICT as a transversal element, which means it is responsibility of all teachers to include ICT (as well as other transversal elements) in their subjects’ syllabus. This paper’s proposal does not include ICT as a transversal element in the syllabus, but it makes ICT one of the cornerstones upon which the proposal is built. With regards to this matter, the regional curriculum for Castilla y León simply refers to the national curriculum, since the regional one fully accepts what is said in the national one and does not need to add any further information. As for the national curriculum, in its first article devoted to transversal elements, it establishes ICT as one of those main transversal elements that will need to be included in every subject taught in the centre. This way, the national curriculum ascertains the importance that should be given to the issue of ICT integration.

• ORDEN EDU/362/2015, de 4 de mayo, por la que se establece el currículo y se regula la implantación, evaluación y desarrollo de la educación secundaria obligatoria en la Comunidad de Castilla y León.

The proposal for educational intervention follows the guidelines stipulated by the community of Castilla y León so that its implementation would be carried out in a centre of this community.

4.1.2. Characteristics of the centre

The aspects related to the characteristics of the centre and the class are described below. I have taken as context the centre in which I have realized the external practices of the Máster en Profesor de Educación Secundaria y Bachillerato, Formación Profesional y Enseñanza de Idiomas, IES Ramón y Cajal, located in Valladolid. This centre has served as an inspiration to contextualize my proposal for educational intervention based on the facilities, resources and materials that are available.
IES Ramón y Cajal is a public centre, located in the neighbourhood of Las Delicias, in the city of Valladolid. The neighbourhood Las Delicias, the most populous of Valladolid, has a population of 27,538 inhabitants according to the census of the City Council of Valladolid in 2015. Since its beginnings the neighbourhood has been working-class population, and its origins are associated with the arrival of the railroad to Valladolid in 1864 and the subsequent construction of the central workshops of repair and maintenance of the Company of the North, which employed more than 2,500 workers at the end of the 19th century, making these workers the first inhabitants of this neighbourhood. Since then, Las Delicias has housed and houses a majority of working population, although in recent years, with the expansion of the neighbourhood to the north and east, it has seen a greater social variety, and since the 1990s it has experienced the arrival of immigrant population and the remarkable aging of its population.

The centre welcomes students from the neighbourhood in ESO and Bachillerato, but also receives pupils residing in other areas of the city, in towns in the province, or even coming from other cities inside and outside the Autonomous Community of Castilla y León, who travel to Valladolid to take vocational training.

By ORDEN EDU/154/2013, de 13 de marzo,¹ the Consejería de Educación established the implementation of the bilingual sections in public schools for the academic course 2013/2014, in which the IES Ramón y Cajal was included. The bilingual section was launched in English. Within this programme, 50% of the classes of Biology and Geology, Physical Education, Physics and Chemistry, Technology, and Geography and History are taught in English by teachers who are accredited for it. These teachers are supported by a conversation assistant who participates in their teaching hours.

Bilingual students of 4th of ESO receive two extra classes of English in the afternoon, apart from the other three compulsory teaching hours that are taught by the English teacher in the mornings. Those two extra hours are taught on Wednesdays from 16:40 to 17:30 and from 17:35 to 18:25. In those two extra hours, the English teacher is accompanied by the conversation assistant, whose mission is to improve English speaking and listening skills.

¹ ORDEN EDU/154/2013, de 13 de marzo, por la que se establece de oficio la puesta en funcionamiento de secciones bilingües en centros públicos y se autoriza la creación de secciones bilingües en centros privados concertados para el curso 2013/2014.
The proposal for intervention is designed for the 13 students that belong to the bilingual section in 4th of ESO and it is going to be implemented in those two extra hours on Wednesday afternoons.

4.2. Justification

"We are detectives" is the title chosen for the proposal, designed to be put into practice in 4º ESO, in the subject of First Foreign Language: English. It consists of 6 sessions of 100 minutes each.

It has been designed following the criteria established by Orden EDU/362/2015, de 4 de mayo, within the block First Foreign Language.

It is a proposal that has as its main objective the improvement of the Competence in Linguistic Communication of the students using a TV series as a didactic tool. It is designed under the principles of the Communicative Approach and the task-based approach.

The central theme of the proposal lies in detective stories. More specifically, in the detective stories of the famous Sherlock Holmes. But in this case, instead of using the short stories created by Arthur Conan Doyle, we are going to use the BBC’s TV series adaptation.

Sherlock is a British TV series that began in 2010 created by the BBC and starred by Benedict Cumberbatch and Martin Freeman. It is a contemporary update of the adventures of Detective Sherlock Holmes, created by Arthur Conan Doyle. Located in the London of the 21st century, the TV series follows the footsteps of the eccentric detective Sherlock Holmes along with his friend Dr. John H. Watson, in their quest to solve the crimes that are taking place. His insuperable deduction skills and arrogant emotional detachment makes him the perfect detective, but he will soon discover that there's someone else following him: the mysterious James Moriarty.

Conan Doyle's stories are about brilliant deductions, with terrible villains and crimes. Other detectives have cases, Sherlock Holmes has adventures. The 21st century Sherlock uses modern technology: text messages, Internet and GPS to solve crimes.
The update maintains some traditional elements of the stories, such as Sherlock’s address in Baker Street and the evil James Moriarty. Although the events of the books are being transferred to the present, there are elements that were incorporated into this new production. For example, Dr. Watson returns from Afghanistan War while the original Watson returned home invalid after serving in the Second Anglo-Afghan War (1878-1880).

Sherlock is distinguished by his speed of thinking. He makes connections incredibly fast. He goes one step ahead of the audience, and those around him with normal intelligence cannot quite understand where his mind is.

Sherlock is a dynamic superhero in a modern world, an arrogant detective, a genius driven by the desire to prove that he is smarter than the perpetrator of the crime and the police, than anyone, indeed. To address current social attitudes and broadcasting regulations, the 21st century Sherlock has replaced the classic pipe with multiple nicotine patches.

4.3. Objectives

General objective:

- To develop a proposal for intervention through the use of a TV series to improve communicative skills in learning English as a First Foreign Language in secondary school students.

Specific objectives:

- To carry out a theoretical study of the different methods and approaches of teaching foreign languages focusing on the Communicative Approach.

- To analyze the role played by ICT, as well as its use in learning English as a foreign language.

- To create activities that will allow us to integrate a TV series in the secondary classroom.

- To promote through the proposed activities the development of communicative skills.
4.4. Competences

The Real Decreto 1105/2014, de 26 de diciembre, por el que se establece el currículo básico de la Educación Secundaria Obligatoria y del Bachillerato establishes which are the competences a student needs to have developed once the school year is finished, namely:

- Competence in Linguistic Communication (CLC)
- Competence in Mathematics, Science and Technology (CMST).
- Learning to Learn (LL)
- Digital Competence (DC)
- Social and Civic Competences (SCC)
- Cultural Awareness and Expression (CAE)
- Sense of Initiative and Entrepreneurship (SIE)

As regards to this paper’s proposal, it is important to notice that it fulfils the previously mentioned requirement that the national curriculum states, since this proposal clearly promotes two of the competences established by both the national and the regional curricula. Firstly, the proposal fosters the Competence in Linguistic Communication, as the whole proposal follows the Communicative Approach. Competence in Linguistic Communication is thus a competence integrated in the contents students have to study, and the lesson proposed in this paper allows students to better develop it. Thanks to the proposed activities, students will develop this competence as they watch the TV series and work with activities related to detective fiction. Secondly, this paper’s proposal contributes to promote Digital Competence, for the integration of ICT involves the use of the BBC’s TV series Sherlock. Thirdly, the proposal encourages the development of the competences Learning to Learn and Sense of Initiative and Entrepreneurship.
4.5. Catering for mixed ability

When designing the activities that would be put into practice in the classroom, I have taken into account the different learning paces of all the students, as well as their levels of English. I have tried to create a didactic unit that is flexible enough to cover everyone’s needs. Therefore, while some activities are a bit demanding, others are easier to carry out. It is very important to make the learning process equally accessible for all the students, providing them with activities that they see they can complete without any difficulty in order to encourage them to keep on learning.

4.6. Methodology

The main objective of the teaching a foreign language is the development of the Competence in Linguistic Communication. There are many teaching methods that can be adopted for teaching a foreign language, however, in this proposal we will focus on the Communicative Approach.

The goal of the Communicative Approach is real communication and the authentic use of language. Thus, it is characterized by placing the emphasis on language as a form of communication. In the same sense, there is an interest on linguistic structures and vocabulary. Language is considered in this approach as a useful communication tool for the creation of meanings. In addition, this approach affirms that there is always a communicative intention linked to the satisfaction of a need. This communication aims to satisfy that need or to develop in society. The Communicative Approach seeks fluency and the ability to develop and to communicate in a language in a specific situation and / or context.
4.7. Description and timing

The proposal consists of 6 sessions, which are developed over six weeks. The sessions of Wednesday afternoons have a duration of 100 minutes.

### ACTIVITIES

**SESSION 1**
1. What’s new with you?
2. Do you want to become detectives?
3. Who is Sherlock Holmes?
4. This is Sherlock Holmes!
5. Other detective stories
6. Synopsis
7. Are you ready?
8. Time to write

**SESSION 2**
1. Let’s remember
2. Episode ending
3. Let’s see who guessed the ending
4. Reflection
5. Do you agree?

**SESSION 3**
1. What are we doing today?
2. Match the character to the descriptive words
3. Casual language
4. Sherlock’s decision
5. Use your imagination

**SESSION 4**
1. How is everything?
2. The mystery of the kidnapped place
3. A strange murder

**SESSION 5**
1. Good afternoon
2. Are you ready to make up a story?
3. Finishing your story

**SESSION 6**
1. Our last day with detective stories
2. Preparing the oral presentation
3. Oral presentation
4.8. Assessment

Regarding the evaluation of the students, the teacher uses three evaluation techniques for the correct and more objective evaluation process:

- **Observation.** The teacher has to be aware of the dynamics of the students, involvement and contribution to the group, predisposition, interest and respect towards others. This is an aspect that receives special attention from ORDEN EDU/362/2015, de 4 de mayo, stating that the evaluation should not be limited to periodic tests, but should include the daily evaluation of the oral and written activities.

- **Carry out of activities both in a group and in an individual way.** The teacher will evaluate the quality of the activities taking into account aspects such as degree of correction, vocabulary used, depth, coherence and clarity.

Regarding the final grade, the mark will be obtained taking into account the following aspects:

- **Student observation** (1 point out of 10 of the final grade). In this aspect, it will be taken into account the participation in the activities carried out in class, the attendance to the same and the respect towards the partners.

- **Hand activities** (2 points on 10 of the final grade).

- **Completion of the final task and subsequent presentation of the activity** (7 points out of 10 of the final grade). The students will be graded taking into account their performance in the oral presentation, as well as in the written paper, according to the following parameters:

| **ORAL PRESENTATION** | • Fluency (2 points)  
|                        | • Accuracy (0.5 point)  
|                        | • Communicative skills (0.5 point) |
| **WRITTEN PAPER**     | • The text had been adequately, clearly and consistently written. (2 points)  
|                        | • The content of the text has a suitable degree of maturity. (0.5 point)  
|                        | • The content of the text is creative and innovative (1.5 points) |
CONCLUSIONS

The proposal for intervention is the result and main objective of this Master’s Thesis. The aim of this proposal was to suggest a way in which both TV series and the Communicative Approach could be brought together and integrated in EFL teaching with the purpose of improving the Competence in Linguistic Communication of the students of secondary education in the subject First Foreign Language: English.

The process of elaboration of the proposal has consisted of two large sections, sequentially related and with two different objectives. First, the research carried out in the initial block has focused on showing that TV series are a didactic resource in the EFL classroom. To achieve this, the term ICT has been defined and classified. It has also been investigated the different formats of watching TV series that have existed throughout history, the benefits and disadvantages that can be involved in the use of a TV series in the classroom and what teachers should take into account to select a TV series. The conclusions obtained in the first block indicate that TV series are a great didactic tool that will help the students to improve their Competence in Linguistic Communication.

Subsequently, the elaboration of the intervention proposal has been made following the principles of the Communicative Approach, which was the second and most important objective of the present Master’s Thesis. This approach has been considered the most appropriate within the many existing methodologies. In this election, the course for which it has been designed had great importance, 4th year of ESO (bilingual group). Since my proposal was oriented to the two extra hours that these students have as they belong to this bilingual program, classes aimed at increasing students' motivation and interest in the English subject by using TV series. In these cases, the Communicative Approach is intended to train the learner to communicate in real life situations - not only in oral but also in writing - with other foreign language speakers.

Finally, it is important to point out that the implementation of this educational intervention proposal will allow detecting the strengths and weaknesses of the design, the operation and interest of the students in the activities, the different attitudes and responsibilities that the students take, as well as the development and teacher performance in working under such conditions.
This paper supports the claim that improvements in EFL teaching and learning must be done through ICT integration and changes in methodology, as an instance of the Communicative Approach in EFL teaching. Thus, EFL teaching might become more efficient and students of EFL might reach a competent proficiency in English.

**Description:** The teacher explains the students that we are going to start a new didactic unit and at the end they have to complete a task in groups that will consist on creating a fictional crime scene and that they will explain it in front of their classmates and the class have to guess who the murder was thanks to the clues they have included. The teacher is going to explain the students that in order to know more about detective stories, they are going to watch BBC’s TV series *Sherlock.*

**Input:** Now, we are starting a new unit! It is called *We are detectives!*, so for the next 6 Wednesday afternoons we will be working on different topics and aspects that are related to detective fiction and that will help you create the final activity of this unit. For this final activity, you will be asked to write in groups a fictional crime scene. When your writings are ready, you are going to explain your crime scene to the rest of the class and, with the clues you are going to give to them, they have to guess what happened. You may have a lot of questions but everything will be explained on the following days, so don’t worry.

Session 1 - Activity 3: Who is Sherlock Holmes?

<table>
<thead>
<tr>
<th>Timing</th>
<th>Typology</th>
<th>Classroom management</th>
<th>Resources</th>
</tr>
</thead>
<tbody>
<tr>
<td>15 minutes</td>
<td>Pre-watching activity</td>
<td>In pairs</td>
<td>Blackboard, paper and pen</td>
</tr>
</tbody>
</table>

**Description:** The teacher is going to ask students to brainstorm in pairs about what they know about Sherlock Holmes. Students have to try to elicit as many words as possible in 5 minutes. After that, the teacher is going to write the name Sherlock Holmes on the blackboard. The teacher is going to ask each pair to say out loud what they have written and the teacher is going to write it on the blackboard so that at the end all students will have in front of them a general overview of who Sherlock Holmes was.
**Input:** Shall we continue? So, in order to know a little bit about detective fiction, we are going to focus on one of the most famous detectives: Sherlock Holmes. In pairs, I want you to write all the things you that you know about Sherlock Holmes or things that this name suggests you.

Now, you are going to tell me all the things you have written and I am going to write them on the blackboard.

### Session 1 - Activity 4: This is Sherlock Holmes!

<table>
<thead>
<tr>
<th>Timing</th>
<th>Typology</th>
<th>Classroom management</th>
<th>Resources</th>
</tr>
</thead>
<tbody>
<tr>
<td>20 minutes</td>
<td>While-watching activity</td>
<td>Individual</td>
<td>Digital whiteboard, photocopies and pen</td>
</tr>
</tbody>
</table>

**Description:** After writing on the blackboard everything students know about Sherlock Holmes, the teacher is going to play a video of 03:48 minutes from the British Council in which it is explained who Sherlock Holmes was through the streets of London. Before playing the video, the teacher is going to give students a photocopy with a series of statements about Sherlock Holmes taken from the video and students have to say if those statements are true or false. The teacher is going to play the video once and wait a little so that students can complete the photocopy. After answering if the statements were true or false, the teacher is going to play the video again so that students can complete any statement they left unanswered or correct any if they think it was wrong. After that, the teacher is going to read the statements and correct them with the students.

**Input:** Now, I am going to play a very interesting video in which we are going to learn who Sherlock Holmes was. I am going to give you a photocopy in which you have to say if the sentences are true or false. I am going to play the video once and I am going to give you a few seconds so that you can complete the photocopy before playing the video again. Now, I give you a few seconds to complete the sentences individually. Perfect! Did you answer all the questions? I am going to play the video again. Done? Now, let’s correct them.
**Session 1 - Activity 5**: Other detective stories

<table>
<thead>
<tr>
<th>Timing</th>
<th>Typology</th>
<th>Classroom management</th>
<th>Resources</th>
</tr>
</thead>
<tbody>
<tr>
<td>5 minutes</td>
<td>Post-watching activity</td>
<td>The whole class</td>
<td>No resources</td>
</tr>
</tbody>
</table>

**Description**: After watching the video about Sherlock Holmes, the teacher is going to ask students if they have read any detective stories before or if they have watched any TV series about detectives, or forensics crime drama television series.

**Input**: Did you enjoy the video? Have you read any story related to detectives? [...] Oh yes? Which one? Or have you watched any TV series related to detectives or solving crimes?

---

**Session 1 - Activity 6**: Synopsis

<table>
<thead>
<tr>
<th>Timing</th>
<th>Typology</th>
<th>Classroom management</th>
<th>Resources</th>
</tr>
</thead>
<tbody>
<tr>
<td>5 minutes</td>
<td>Pre-watching</td>
<td>Individual</td>
<td>Digital board</td>
</tr>
</tbody>
</table>

**Description**: After the break of 5 minutes, the teacher tells the students that they are going to start watching the first episode of the first season of the TV series *Sherlock*. The teacher is going to tell the synopsis of this first episode so that they have a general idea before watching it. After that the teacher asks the students if they think that they are going to like it.

**Input**: Now, let me read you the synopsis of the episode so that you have a general idea. Synopsis: The police are investigating a series of suicides that apparently have in common that all the deceased took the same poison pill. They resort to the aid of their detective adviser, Sherlock Holmes. Sherlock, for his part, meets John Watson, a retired military doctor from Afghanistan.

Do you think that you are going to like it or not?
**Session 1 - Activity 7: Are you ready?**

<table>
<thead>
<tr>
<th>Timing</th>
<th>Typology</th>
<th>Classroom management</th>
<th>Resources</th>
</tr>
</thead>
<tbody>
<tr>
<td>45 minutes</td>
<td>While-watching activity</td>
<td>Individual</td>
<td>Digital board, photocopy and pen</td>
</tr>
</tbody>
</table>

**Description:** Before playing the video, the teacher is going to give the students a photocopy with some questions for them to find the answers while watching the episode. The teacher explain the students that the episode will be stopped in minute 45 and that they have to write a brief essay telling what they think that is going to happen.

**Input:** I am going to give this photocopy with some questions and you have to answer at the same time you watch the episode. Read the questions while I put the episode on the digital board.

**Session 1 - Activity 8: Time to write**

<table>
<thead>
<tr>
<th>Timing</th>
<th>Typology</th>
<th>Classroom management</th>
<th>Resources</th>
</tr>
</thead>
<tbody>
<tr>
<td>5 minutes</td>
<td>Post-watching activity</td>
<td>Individual</td>
<td>Paper and pen</td>
</tr>
</tbody>
</table>

**Description:** Once the episode is stopped, the teacher asks the students to write what they have been told and the teacher is going to collect the writings so that the following week they can discover everything and compare it with what they wrote.

**Input:** Now, I want you to write what you think that is going to happen in the next part of the episode. Put your names in the paper and hand it in when you finish.
SESSION 2

<th>Classroom management</th>
<th>Resources</th>
</tr>
</thead>
<tbody>
<tr>
<td>15 minutes</td>
<td>Post – watching activity</td>
<td>Individual</td>
<td>Paper and pen</td>
</tr>
</tbody>
</table>

**Description:** After a break of 5 minutes, the teacher is going to ask the students if the final was the same they wrote last week. The teacher is going to read anonymously the hypotheses students wrote to see the different hypotheses they made. After that, the teacher is going to ask them what they think about the TV series, if they have liked it and what called their attention the most.

**Input:** Did you enjoy the TV series? Now I am going to read anonymously some of your ideas of what was going to happen. What do you think of this one? This one is also really interesting. Now, tell me, did you enjoy watching the TV series *Sherlock*? Did you like it? What called your attention the most?

**Session 2 - Activity 4:** Reflection

<table>
<thead>

</tbody>
</table>

**Description:** The teacher greets the students and asks them to guess what they think that they are going to do today.

**Input:** Good afternoon everyone. I want you to tell me what do think that we are going to do today. The two last weeks we watched the TV series *Sherlock*, but can you imagine what are we going to do today?

**Session 3 - Activity 2:** Match the descriptive words to the characters

<table>
<thead>
<tr>
<th>Timing</th>
<th>Typology</th>
<th>Classroom management</th>
<th>Resources</th>
</tr>
</thead>
<tbody>
<tr>
<td>15 minutes</td>
<td>Introductory activity</td>
<td>In groups</td>
<td>Photocopy and pen</td>
</tr>
</tbody>
</table>

**Description:** The teacher explains that today they are not going to watch another episode of the TV series but rather they are going to work with some activities that are based on the episode they watched the previous week. The teacher is going to give students a photocopy in which students have to match the descriptive words to the characters. After that, the groups are going to share with the class what they have written.
**Input:** Today we are not going to watch another episode of *Sherlock*, but we are going to work on some activities related to *Sherlock’s* episode “A Study in Pink”. Are you ready to start? So now, I am going to give you this photocopy. You have to match the descriptive words to the characters you have in there. You can use the same descriptive words for different characters. Once you have finished, we are going to put your ideas in common.

**Session 3 - Activity 3:** Casual language

<table>
<thead>
<tr>
<th>Timing</th>
<th>Typology</th>
<th>Classroom management</th>
<th>Resources</th>
</tr>
</thead>
<tbody>
<tr>
<td>40 minutes</td>
<td>Reinforcement activity</td>
<td>In groups</td>
<td>Photocopy and pen</td>
</tr>
</tbody>
</table>

**Description:** The teacher is going to give students a photocopy with different expressions that appear in the TV series and the context in which they appear. After reading and understanding those expressions, students are asked to complete some sentences with those expressions they already have. After completing the activity, the teacher is going to ask the groups to create new sentences using those expressions. After that, the groups are going to say to the rest of the class the sentences they have created.

**Input:** Now, I am going to give you another photocopy. It is about different expressions that appear in the episode which are really interesting. Read them, try to understand their meaning and then complete the sentences below with the correct expression. After that, you are going to invent five sentences in which you are going to use the 5 expressions you have learnt. After that, you are going to read the sentences to the rest of the class.

**Session 3 – Activity 4:** Sherlock’s decision

<table>
<thead>
<tr>
<th>Timing</th>

### A STUDY IN PINK – SHERLOCK (SEASON 1 – EPISODE 1)

1. Number the sentences in the correct order.

- John and Sherlock meet for the first time.
- John goes to see his therapist.
- John meets an old friend in a park.
- John looks around the flat at 221B Baker Street.
- Lestrade tells Sherlock about a fourth death in the case.
- John has a nightmare about his time in the army.
- Sherlock and John take a taxi to the crime scene.
- Lestrade is interrupted by text messages.

2. Why did John Watson leave the army? _________________________________

3. The name of Sherlock’s landlady is:

- Mrs Watson  
- Mrs Anderson  
- Mrs Wilson  
- Mrs Hudson

4. What is the colour of the victim’s suitcase: ____________________________

5. The object missing from her suitcase is:

- her credit card
- her lighter
- her mobile phone
- her lipstick
- her key

Session 3 – Activity 2

1. Give each character words that best suit for their personality. You can use the same word for different characters.

   resourceful dynamic genius deductive brave enigmatic good trigger not
   friendly kind brilliant insulting sociopath dangerous polite serious
   precise person with values sincere

Sherlock Holmes:
____________________________________________________________________
____________________________________________________________________

John Watson:
____________________________________________________________________
Session 3 – Activity 3

Casual language

- ‘won’t take no for an answer’. John Watson doesn’t really want to have a coffee and discuss the past. But Mike ‘wouldn’t take no for an answer’. He goes and gets the coffee anyway.
- ‘all in your mind’. Sherlock tells John that his limp is ‘all in his mind’. He means that it is not really a physical problem.
- ‘There’s no point in … ’. When Sherlock finds out about the case, he says, ‘There’s no point in sitting at home!’ He means that sitting at home is a useless thing to do when there is a crime to investigate.
- ‘to keep up with somebody’. When Sherlock is investigating the death of Jennifer Wilson, John realises that it ‘wasn’t easy to keep up with’ the speed of Sherlock’s ideas. His ideas move too fast for others to follow them easily.
- ‘Take your time’. When Sherlock must choose between the two pills, the taxi driver tells him: ‘Take your time.’ This means that he doesn’t have to make a choice in a hurry.

Complete the sentences with the expressions.
1. A: I’m not ready yet.’
   B: ……………………… . Our taxi won’t arrive until eight o’clock.
2. She’s brilliant at maths. I …………………… her.
3. A: I don’t feel very well.
   B: …………………… . Go to school!
4. Let’s go to the cinema. Come on. I …………………… !
5. If you want to do well in your exams, …………………….watching TV every evening.
Create five sentences by your own using the expressions learnt in this activity

1. _______________________________________________________________
2. _______________________________________________________________
3. _______________________________________________________________
4. _______________________________________________________________
5. _______________________________________________________________

The Mystery of the kidnapped plane
An airplane that flew from Paris to Madrid was kidnapped. Your job is to find among
the suspects the police have, who is most likely to be the kidnapper.

CLUES:
The plane was kidnapped the afternoon of August 14.
The plane was forced to fly over the island of Fayal (Azores) where the kidnapper was
parachuted during the night.
Two days after the kidnapping the Fayal police arrested five French women who
responded to the description of the abductor.
Elisa López is an archaeologist whose hypothesis is that the man originally comes from
the island of Fayal and performs excavations in search of evidence.
Bárbara Bans is searched in France for the sale of 50 kg of marijuana.
Ana Martín shows a great interest in the religious festivals of the Azores.
Felisa Diaz had fallen in love with a native when he was studying at the Sorbonne.
Matilde Marcos is the secretary of Barbara Bans.
The archaeologist has black hair and brown eyes.
Matilde Marcos arrived for the first time on 16 August.
The Police reported that a girl with a large, strange dog had come to the island a month
earlier in a boat from the Canaries.
The police found Elisa López unraveling a parachute from a tree.
The girl in love with the native has a shepherd dog crossed with a greyhound, named
Ruser.
The kidnapper has light brown hair and blue eyes.
The sister of the Protestant pastor and his secretary arrived on the island by boat from
the Canaries.
The kidnapper escaped from a mental hospital in France.
The brother of Barbara Bans is the Protestant pastor and has been living on the island
for a year
