

Methodology of the Laboratory Sessions

- At least one week in advance of the session, a lab guide is published in the Learning Management System (LMS) course associated to the subject.
- Then, during the first 10 minutes of the on-site session, students must individually fill out a questionnaire to check if they have read and understood the lab guide before proceeding with the experiments.
- During the on-site session, the instructor provides specific guidelines of the steps that students have to follow, and supervises the work in each phase.
- During the on-site session, students have to fill out a template given by the teacher, with the results obtained in the session, and answering related questions.
